PROFESSIONAL EXPERIENCE

AI Engineer (Contract, Flexible Hours) Apr 2026 – Present

Traciety | New York, NY | Remote

- Traced why 46% of Slack booking messages were not linked to a clinic to n8n workflows using an anonymous database key that a security hardening had silently blocked (200 OK, zero rows); fixed them, lifting attribution from 54.3% to 97.0% and reviving a location sync that had failed 171 runs in a row.
- Built a direct Meta Ads reporting pipeline that reads performance straight from Meta (34 of 48 ad accounts at launch) and measures it against GoHighLevel's numbers, so the dashboard can move off GoHighLevel as its ad-data source.
- Corrected billing due dates that had drifted for 42 of 57 matched clients (now 0) by syncing from Notion; closed an anonymous-key read and write hole on client location tables and cleared 18 Supabase Security Advisor errors.
- Built and extended the image-ad and HeyGen video-ad generation surfaces in the production dashboard, drawing on a 300+ ad creative library, so the team generates medspa ads from structured service and offer inputs instead of producing each asset by hand.
- Shipped 166 merged pull requests (62% of the dashboard repo, Apr–Oct 2026); owned technical operations for 40+ client sub-accounts, 18 n8n workflows, and 6+ data systems.

Technical Lead (Full-Time Contract) Apr 2025 – Oct 2025

Crowdsnare AI | Houston, TX | Remote

- Managed end-to-end development for 6 AI agent products while serving as the technical point of contact for clients, leadership, and junior teammates.
- Architected production lead automation using n8n and GoHighLevel, reducing lead processing from manual hours to seconds with OpenAI, Supabase, MCP-enabled tooling, and webhook routing.
- Restored critical production workflows by debugging logic-path routing issues, standardizing payload handling, and adding retry patterns to keep lead ingestion reliable.

Software Engineer Intern (Internship) Nov 2025 – Mar 2026

Ayahay | Cebu, Philippines | Hybrid

- Architected and deployed multi-tenant RAG chatbot infrastructure for Ayahay v2, shipping a backend knowledge-base SDK and React chat UI library for reusable tenant integrations.
- Refactored chatbot services into NestJS microservices, reducing response latency by about 40% and improving retrieval recall by about 57% through similarity-threshold tuning and prompt optimization.
- Centralized business logic for Next.js and NestJS maritime booking systems in an API gateway and optimized PostgreSQL route and schedule lookups to sub-second latency.

Full-Stack Developer (Full-Time) Jul 2024 – Mar 2025

Freckles Graphics, Inc. | Lafayette, IN | Remote

- Architected an automated production workflow for Polaris DTG printers processing 500+ daily orders, integrating ShopWorks API, WaveSpeed AI, QR generation, and intelligent artwork sizing to reduce manual processing time by 85% for a $12M+ annual revenue operation.
- Built a Next.js and TypeScript AI image generation studio enabling designers to create 1K–4K artwork with text-to-image generation, 10-image reference composition, style presets, sub-30-second generation, and 95%+ success rates.
- Built Python/Flask and Supabase order tooling for 5 print locations with auto-crop, transparent-border removal, white-pixel detection, and a RAG-powered eFORCE CRM assistant.

AI Automation Developer (Part-Time) Jul 2025 – Jan 2026

Cinematography for Actors Institute | Los Angeles, CA | Remote

- Architected and deployed AI-powered email automation on Google Cloud Run, reducing response time by 70% with contextual replies grounded in 50+ SOPs, FAQs, and internal company documents.
- Built grant information request automation using Cloud Run, Node.js, and Google Drive integrations, eliminating manual notification workflows and enabling document-aware responses with attachments.
- Managed Google Cloud infrastructure across Cloud Run, Pub/Sub, Secret Manager, and Cloud Storage while optimizing Ghost CMS mobile Lighthouse from 45 to 85+ (LCP from 15.4s to under 3.5s).

EDUCATION

Bachelor of Science in Information Technology Graduated May 2026

Cebu Institute of Technology – University • Cebu, Philippines

Relevant coursework: Data Structures & Algorithms, Software Engineering, Databases, Web and Mobile Development

CERTIFICATIONS

Cloud

- AWS Academy Cloud Architecting
- AWS Academy Cloud Foundations

AI (Anthropic Academy, 18 certificates, Jun 2026)

- Claude Code in Action; Building with the Claude API; Model Context Protocol (Intro and Advanced); Agent Skills; Subagents

Software Development (Udemy)

- Python & Django Full Stack Bootcamp
- Web API in .NET 8
- PHP Full Stack Bootcamp
- Angular – The Complete Guide

Additional

- Accenture Digital Skills: UX
- Foundational C# with Microsoft (freeCodeCamp)
- Java OOP Certification (Codechum)

SELECTED PROJECTS

AutoApply: Multi-Tenant Job Application Engine Jun 2026 – Present

Node.js, Playwright, Supabase (Postgres, Auth, Edge Functions), React, TypeScript, OpenAI

- Built and operate a job-application SaaS used by 11 people: it parses resumes, scores fit with a chain of AI models, and submits through Playwright and direct Greenhouse, Ashby, Lever, and micro1 integrations (113 commits across backend, frontend, and database repos).
- Designed an ATS collector that sweeps public board APIs (60 boards, 3,186 jobs in one sweep) into a job index, so each run scores about 300 listings instead of only the newest 30.
- Wrote 377 passing tests and root-caused two production failures: a stored resume that was a raw multipart envelope (the PDF began at byte 267), which corrupted every attachment, and an AI-provider outage that dropped applications to zero, fixed with model fallthrough and an outage brake.

weewoo: End-to-End Encrypted Location Sharing and Chat Sep 2026

Flutter, Dart, Supabase (Postgres, RLS), libsodium, Argon2id

- Built a self-hostable, Life360-style mobile app where the server stores only ciphertext: Argon2id key derivation from the password, libsodium sealed boxes for per-member circle keys, and per-epoch keys so a removed member's key opens nothing sent afterwards.
- Enforced privacy in the database rather than the client: 36 row-level-security policies across 9 tables gate who can read a position, turning sharing off deletes the stored coordinate, and accounts need no email or phone number.
- Shipped 11.7k lines of Dart with 223 passing tests and a design doc covering the threat model, key lifecycle, and what the operator can still observe.

Ayahay RAG Knowledge Base SDK Jan 2026 – Apr 2026

TypeScript, React, OpenAI, PostgreSQL pgvector, Vercel AI SDK; open source at github.com/JivSTuban/knowledge-base-sdk

- Published a TypeScript SDK for document ingestion, vector search, streaming responses, and live-data tools, plus a whitelabel React chat widget, powering Ayahay's multi-tenant chatbots.

AWARDS AND COMPETITIONS

GCash ImaGnation 2025 Hackathon Winner | CAT5 Team Nov 2025

React, Supabase, Solana, @solana/web3.js, real-time transaction state

- Won top prize among 196 teams and 980 students for GAssure, a blockchain-backed escrow solution addressing middle-man scams in P2P and B2B transactions.
- Architected a trustless escrow flow with immutable audit trails, real-time balance tracking, and multi-party transaction handling.

TECHNICAL SKILLS

Backend: Node.js, NestJS, Spring Boot, Django, FastAPI, Flask, ASP.NET Core, Laravel, REST APIs, microservices
Frontend and Mobile: JavaScript, TypeScript, React, Next.js, Flutter, Dart, Vue.js, Angular, Svelte, Tailwind CSS, Bootstrap, Blazor
Databases and Platforms: Supabase, PostgreSQL, MySQL, Airtable, GoHighLevel, Google Sheets, Notion, Slack
AI and Automation: OpenAI API, RAG systems, MCP, prompt engineering, Playwright, n8n, Zapier, Make, Vapi, ElevenLabs, AI agents, Claude Code, Codex CLI, libsodium, Argon2id
Cloud and DevOps: AWS, Google Cloud Run, Pub/Sub, Secret Manager, Cloud Storage, Docker, PM2, GitHub, CI/CD, DigitalOcean, Apache Kafka
